# IB IL AO 1/SF <br> IB IL AO 1/SF-PAC 

Inline Terminal<br>With One Analog Output

- Process data update including conversion

The IB IL AO 1/SF and IB IL AO 1/SF-PAC only differ in the scope of supply (see "Ordering Data" on page 16). Their function and technical data are identical.

For greater clarity, the Order Designation IB IL AO 1/SF is used throughout this document.

This data sheet is only valid in association with the IB IL SYS PRO UM E User Manual or the Inline System Manual for your bus system.

## Function

The terminal is designed for use within an Inline station. It is used to output analog voltage or current signals. The signals are available with a resolution of 16 bits.

## Features

- One analog signal output to connect either voltage or current signals
- Actuator connection in 2-wire technology with shield connection
- Two current ranges, one voltage range:

0 mA to $20 \mathrm{~mA}, 4 \mathrm{~mA}$ to 20 mA
0 V to 10 V
time of the digital-to-analog converter $<1 \mathrm{~ms}$

$1!$
Only one output must be used on the terminal. Use a connector with shield connection when installing the actuator.

Local LED Diagnostic and Status Indicators

| Des. | Color | Meaning |
| :---: | :--- | :--- |
| D | Green | Bus diagnostics |
| UB | Green | I/O voltage for analog terminals <br> present (current level) |

## Terminal Assignment

| Conn <br> ector | Terminal <br> Point | Signal | Assignment |
| :--- | :--- | :--- | :--- |
| $\mathbf{1}$ | 1.1 | U | Voltage output <br> 0 V to 10 V |
|  | 2.1 | - | Not used |
|  | 1.1 | I | Current output <br> 0 mA to 20 mA |
|  | 2.1 | I | Current output <br> 4 mA to 20 mA |
|  | $\mathbf{1 . 2 , 2 . 2}$ | $\mathbf{1 . 3 , 2 . 3}$ | GND |
|  | $\mathbf{1 . 4 , 2 . 4}$ | Shield | Shield connection |

Figure 2 IB IL AO 1/SF with appropriate connectors

## Installation Instructions

High current flowing through the potential jumpers $U_{M}$ and $U_{S}$ leads to a temperature rise of the potential jumpers and the inside of the terminal. Observe the following instructions to keep the current flowing through the potential jumpers of the analog terminals as low as possible:

Create a separate main circuit for each analog terminal.
If this is not possible in your application and if you are using analog terminals in a main circuit together with other terminals, place the analog terminals behind all the other terminals at the end of the main circuit.

Please note the derating curve on page 12.

## Internal Circuit Diagram

Analog output
Analog ground, electrically isolated from ground of the potential jumper

Other symbols are explained in the IB IL SYS PRO UM E User Manual or in the Inline System Manual for your bus system.

## Electrical Isolation

Figure 4 Electrical isolation of the individual function areas

## Connection Notes

$\Delta$
Always connect the analog actuator using shielded, twisted pair cables.
Connect one end of the shielding to PE. At the module, fold the outer cable sheath back and connect the shield to the terminal via the shield clamp. The clamp connects the shield directly to FE on the terminal side.

When using cables longer than 10 m ( 32.81 ft .) in environments prone to interference, we recommend connecting the shield on the actuator to the FE potential via an RC element. Typically, the capacitor $C$ should be rated between 1 and 15 nF . The resistor R should be at least $10 \mathrm{M} \Omega$.

Use an I/O connector with shield connection when installing the actuator. On the base side that is not used to connect an actuator, you may use one of the connectors listed in the ordering data. The appearance of the module differs depending on the output used. This is shown in Figure 5 and Figure 6 in the top left corner.

## Connection Examples

因
Use a connector with shield connection when installing the actuator. Figure 5 and Figure 6 show the connection schematically (without shield connector).

## Voltage Output

## OUT Process Data Output Word

The process data output word specifies the output value in each cycle.

Process data word

Figure 7 Process data output word
AV Analog value
MSB Most significant bit
LSB Least significant bit
All output values are displayed with 16-bit resolution.
For significant values in the process data word, refer to the following tables.

Abbreviations used in the following tables:

QS Quantization step(s)
MSB Most significant bit

ORF Output range final value LSB Least significant bit

## OUT Process Data Output Word for the Voltage Output 0 V to 10 V (Example)

## Output Behavior of the Voltage or Current Output

Take the behavior of the output in the event of an error into account when planning your system.

| Switching Operation/State of the Supply Voltage | Marginal Condition | OUT Process Data Word (hex) | Behavior/Status of the Analog Output |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 0 V to 10 V | 0 mA to $\mathbf{2 0 ~ m A ~}$ | 4 mA to $\mathbf{2 0 ~ m A}$ |
| $U_{\text {ANA }}$ from 0 V to 24 V | $\mathrm{U}_{\mathrm{L}}=0 \mathrm{~V}$ | xxxx | 0 V | 0 mA | 4 mA |
| $\mathrm{U}_{\text {ANA }}$ from 24 V to 0 V | $\mathrm{U}_{\mathrm{L}}=7.5 \mathrm{~V}$ | xxxx | 0 V | 0 mA | 0 mA |
| Bus in STOP state | $\mathrm{U}_{\text {ANA }}=0 \mathrm{~V}$ | xxxx | 0 V | 0 mA | 0 mA |
| Bus in STOP state | $\mathrm{U}_{\text {ANA }}=24 \mathrm{~V}$ | XXXX | Maintains last value |  |  |

$U_{\text {ANA }}$ Analog supply voltage of the terminal
$U_{L} \quad$ Supply voltage of the module electronics (communications power)
xxxx Any value in the range from $0000_{\text {hex }}$ to $\mathrm{FFFF}_{\text {hex }}$.

The behavior and status of the output depends on the output used.

Response of the Control System or Computer to a Hardware Signal for Different Control or Computer Systems

| Signal | Control <br> or | Status After the Switching Operation |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  |  | OUT Process Data <br> Output Word | Analog Output |  |
|  |  |  | $\mathbf{U}_{\text {out }}$ | $\mathbf{I}_{\text {out }}$ |
| NORM $^{*}$ | AEG Schneider <br> Automation | 0000 | 0 V | $0 \mathrm{~mA} / 4 \mathrm{~mA}$ |
| BASP | Siemens S5 | 0000 | 0 V | $0 \mathrm{~mA} / 4 \mathrm{~mA}$ |
| CLAB | Bosch | 0000 | 0 V | $0 \mathrm{~mA} / 4 \mathrm{~mA}$ |
| SYSFAIL | VME | 0000 | 0 V | $0 \mathrm{~mA} / 4 \mathrm{~mA}$ |
| SYSFAIL | PC | 0000 | 0 V | $0 \mathrm{~mA} / 4 \mathrm{~mA}$ |
| CLEAR OUT | Moeller IPC | 0000 | 0 V | $0 \mathrm{~mA} / 4 \mathrm{~mA}$ |

* On controller boards for AEG Schneider Automation control systems it is possible to set the NORM signal so that the OUT process data output word and the analog output maintain the last value.

The status of the current output depends on the range selected.

Response of the Voltage and Current Outputs to a Control Command of the Controller Board

| Command | Status After the Switching Operation |  |  |
| :---: | :---: | :---: | :---: |
|  | OUT Process Data Output <br> Word | Analog Output |  |
|  |  | $\mathbf{U}_{\text {out }}$ | $\mathrm{I}_{\text {out }}$ |
| STOP | Maintain last value | Maintain last value | Maintain last value |
| ALARM STOP (reset) | Maintain last value | Maintain last value | Maintain last value |

## Technical Data

| General |  |
| :---: | :---: |
| Housing dimensions (width x height x depth) | $24.4 \mathrm{~mm} \times 120 \mathrm{~mm} \times 71.5 \mathrm{~mm}$ ( $0.961 \times 4.724 \times 2.815$ in.) |
| Weight | 90 g (without connectors), 100 g (including connectors) |
| Operating mode | Process data mode with 1 word |
| Type of actuator connection | 2-wire technology |
| Permissible temperature (operation) | $-25^{\circ} \mathrm{C}$ to $+55^{\circ} \mathrm{C}\left(-13^{\circ} \mathrm{F}\right.$ to $\left.+131^{\circ} \mathrm{F}\right)$ |
| Permissible temperature (storage/transport) | $-25^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}\left(-13^{\circ} \mathrm{F}\right.$ to $\left.+185^{\circ} \mathrm{F}\right)$ |
| Permissible humidity (operation) | $75 \%$ on average, $85 \%$ occasionally |
| In the range from $-25^{\circ} \mathrm{C}$ to $+55^{\circ} \mathrm{C}\left(-13^{\circ} \mathrm{F}\right.$ to $\left.+131^{\circ} \mathrm{F}\right)$ appropriate measures against increased humidity (>85\%) must be taken. |  |
| Permissible humidity (storage/transport) | $75 \%$ on average, 85\% occasionally |
| For a short period, slight condensation may appear on the outside of the housing if, for example, the terminal is brought into a closed room from a vehicle. |  |
| Permissible air pressure (operation) | 80 kPa to 106 kPa (up to 2000 m [6562 ft.] above sea level) |
| Permissible air pressure (storage/transport) | 70 kPa to 106 kPa <br> (up to 3000 m [9843 ft.] above sea level) |
| Degree of protection | IP 20 according to IEC 60529 |
| Class of protection | Class 3 according to VDE 0106, IEC 60536 |

## Deviations From Common Technical Data That Is Indicated in the IB IL SYS PRO UM E User Manual

## Mechanical Requirements

Shock test
according to EN 60068-2-27, IEC 60068-2-27

15 g load for 11 ms , half sinusoidal wave, three shocks in each space direction and orientation
25 g load for 6 ms , half sinusoidal wave, three shocks in each space direction and orientation

| Interface |  |
| :--- | :--- |
| Local bus | Through data routing |

| Power Consumption |  |
| :--- | :--- |
| Communications power $\mathrm{U}_{\mathrm{L}}$ | 7.5 V |
| Current consumption from $\mathrm{U}_{\mathrm{L}}$ | 30 mA, typical; 40 mA , maximum |
| I/O supply voltage $\mathrm{U}_{\text {ANA }}$ | 24 V DC |
| Current consumption at $\mathrm{U}_{\text {ANA }}$ | 50 mA, typical; 65 mA, maximum |
| Total power consumption | 1.425 W (typical) |

| Supply of the Module Electronics and I/O Through Bus Terminal/Power Terminal |  |

## Additional Tolerances Influenced by Electromagnetic Fields

| Type of Electromagnetic Interference | Criterion | Typical Relative Deviation of the <br> Measuring Range Final Value |
| :--- | :---: | :---: |
| Electromagnetic fields <br> Field strength 10 V/m <br> according to EN 61000-4-3/IEC 61000-4-3 | A | $<1 \%$ |
| Fast transients (bursts) <br> Supply 2 kV, output 1 kV <br> according to EN 61000-4-4/IEC 61000-4-4 | B | $<1 \%$ |
| Conducted interference <br> Class 3 (test voltage 10 V) <br> according to EN 61000-4-6/IEC 61000-4-6 | A | $<6 \%$ |

## Safety Devices

None

## Electrical Isolation/Isolation of the Voltage Areas

The electrical isolation of the logic level from the I/O area is ensured by the DC/DC converter.

## Common Potentials

24 V I/O voltage, 24 V segment voltage, and GND have the same potential. FE is a separate potential area.

| Separate Potentials in the System Consisting of Bus Terminal/Power Terminal and I/O <br> Terminal |
| :--- |
| - Test Distance |
| 7.5 V supply (bus logic)/24 V supply $\mathrm{U}_{\mathrm{ANA}} / \mathrm{I} / \mathrm{O}$ |
| 7.5 V supply (bus logic)/24 V supply $\mathrm{U}_{\mathrm{ANA}} /$ - Test Voltage |
| 24 V supply (I/O)/functional earth ground |

## Error Messages to the Higher-Level Control or Computer System

Failure or insufficient communications power $\mathrm{U}_{\mathrm{L}} \quad$ Yes, I/O error message sent to the bus terminal

## Ordering Data

| Description | Order Designation | Order No. |
| :--- | :--- | :--- |
| Terminal with one analog output to output either voltage or <br> current signals; <br> including connectors and labeling fields | IB IL AO 1/SF-PAC | 2861315 |
| Terminal with one analog output to output either voltage or <br> current signals | IB IL AO 1/SF | 2726298 | | One of the listed connectors is needed for the complete fitting of the IB IL AO 1/SF |
| :--- |
| terminal. |

The following shield connector must be used to connect the actuator:

| Connector with six terminals, spring-cage connection and <br> shield connection (green, w/o color print); pack of 5 | IB IL SCN-6 SHIELD | 2726353 |
| :--- | :--- | :--- |

On the base side that is not used to connect an actuator, one of the following connectors can be used:

| Connector with six terminals, spring-cage connection and <br> shield connection (green, w/o color print); pack of 5 | IB IL SCN-6 SHIELD | 2726353 |
| :--- | :--- | :--- |
| Connector with eight terminals, spring-cage connection <br> (green, w/o color print); pack of 10 | IB IL SCN-8 | 2726337 |
| Connector with eight terminals, spring-cage connection <br> (green, with color print); pack of 10 | IB IL SCN-8-CP | 2727608 |
| "Configuring and Installing the INTERBUS Inline Product <br> Range" User Manual | IB IL SYS PRO UM E | 2743048 |
