

JC-350

Version Update

from V 1.03 to V 1.04

Introduction

Revision 1.01

Jetter AG reserves the right to make alterations to its products in the interest of technical progress. These alterations need not be documented in every single case.

This Version Update and the information contained herein have been compiled with due diligence. However, Jetter AG assume no liability for printing or other errors or damages arising from such errors.

The brand names and product names used in this document are trademarks or registered trademarks of the respective title owner.

1 Introduction

Introduction This chapter shows the history of OS versions for the controller JC-350.

Operating System Update - Why? An OS update for the controller JC-350 allows you to:

- add new functions to your controller
 - fix software bugs
 - make sure your controller is working with a definite OS version, for example, if a definite OS version has been released for a certain customer
-

Contents This chapter contains the following topics:

Operating System Update.....	5
JC-350 Version Update - Overview	6

Operating System Update

OS File for Updating the Operating System

For updating the OS the following file is needed:

OS File	Description
JC-350_1.04.0.0.os	OS file for JC-350 with version 1.04

Downloading the OS File

Jetter AG make operating system files available for download from their homepage at www.jetter.de. OS files can be found in the support area or on the page of the JC-350 controller via quicklink.

Operating System Update by means of JetSym

To update your OS proceed as follows:

Step	Action
1	Download the OS file from www.jetter.de
2	Establish a connection between PC and controller
3	In JetSym, activate menu item "Build -> Update OS"
4	Select the OS File
5	Initiate the OS update by clicking OK
6	Result: Following Power OFF / Power ON the new OS is launched.

Minimum Requirements

For programming a JC-350 with version 1.04 JetSym 4.1 or higher is required.

JC-350 Version Update - Overview

V 1.04

The following table gives an overview of newly added features and fixed software bugs in OS version 1.04:

Feature	New	Bug
JX2 System Bus:		
Register Overlaying for Digital Inputs/Outputs	✓	
Support of JX-SIO modules and third-party CANopen devices	✓	
JX3 System Bus:		
Register Overlaying for Digital Inputs/Outputs	✓	
System bus special registers for status and control	✓	
Operating System Update:		
Via FTP: On completion notification the OS has actually been stored.		✓
Updating a JX2-Slave module while registers are accessed blocks communication		✓
Application Program:		
Task switch could fail to happen	✓	
Error signal in case of invalid file "/app/start.ini"	✓	
Display Commands:		
Redirection to JX2-SER1 works only if JX2-PRN1 has been configured		✓

2 New Features

Introduction

Jetter AG are continuously striving to add new features and functions to the controller JC-350. By updating your OS you are given the possibility to enhance the functionality of your controller. To do so, you need the following ...

- an OS file
 - the software tool JetSym
 - a connection between PC and controller
-

Contents

This chapter contains the following topics:

Topic	Page
Register Overlaying for Digital Inputs/Outputs	8
JX3 System Bus: Registers for Status and Control	10
Modules suitable for connection to the system bus.....	14

Register Overlaying for Digital Inputs/Outputs

Introduction

The controller JC-350 provides registers which are overlaid by digital inputs and outputs on the JX2 and JX3 system bus. This allows consistent access to a whole group of inputs or outputs using only one command.

Overlaying

- One input or output is mapped to one bit in an overlaying register.
 - There are registers where 8, 16 or 32 inputs/outputs are integrated.
 - Inputs/outputs from different modules can be combined into one register.
 - For a detailed assignment of inputs/outputs to registers refer to chapter *Quick Reference*.
-

Sample Program

Task:

A 2-position BCD switch is to be read out. The BCD switch is connected to inputs 1 to 8 of the first input module on the JX3 system bus.

Solution:

The position of the switch is read out from an overlaid I/O register and the result is converted from BCD to binary representation. In this example, the conversion is carried out using a system function or "manually" for demonstration purposes.

Configuration:

Connection of the switch to the input module:

Input #	BCD switch
100000201	Units place: Bit 0
100000202	Units place: Bit 1
100000203	Units place: Bit 2
100000204	Units place: Bit 3
100000205	Tens place: Bit 0
100000206	Tens place: Bit 1
100000207	Tens place: Bit 2
100000208	Tens place: Bit 3

JetSym STX Program

```
#Include "Platforms.stxp"

Var
    SetValue:           Int At %VL 1000100;
    BCDswitch:         Int At %VL 100004122;
    UseSystemFunction: Bool;
End_Var;

Task ReadBCDswitch Autorun
Loop
    If UseSystemFunction Then
        Systemfunction(4, &BCDswitch, &SetValue);
    Else
        SetValue := (BCDswitch >> 4) * 10
                    + (BCDswitch And 0x0f);
    End_If;
End_Loop;
End_Task;
```

JX3 System Bus: Registers for Status and Control

Overview

Register(s)	Function
R 100002000	JX3 system bus revision
R 100002008	Error (bit-coded)
R 100002011	Module number in case of error
R 100002013	Number of detected JX3 modules
R 100002015	Index to module array
R 100002016	Module array
R 100002011	Register number in case of error
R 100002764	Timeout for register access [ms]

R 100002000

JX3 system bus revision

This register contains the revision number of the JX3 system bus driver.
The revision number is a four-figure value.

Element	Function
1	Driver ID
2	Driver revision
3	0
4	0

Select the format *IP address* in the setup window of JetSym.

R 100002008

Error

This register shows the error status.

Meaning of the individual bits

Bit 3 Error when accessing a JX3 module

1 = When accessing a JX3 module, an error has occurred

Register properties

Type of access Read access

Write access will delete the register content

R 100002011**Module number in case of error**

This register indicates the number of the module which should be accessed when the last error occurred.

Register properties

Values	0, 2 ... 17
--------	-------------

Type of access	Read access
----------------	-------------

Write access will delete the register content	
---	--

Takes effect	if bit 3 in R 100002008 is set
--------------	--------------------------------

R 100002013**Number of detected JX3 modules**

This register indicates the number of JX3 modules which have been detected during system launch.

Register properties

Values	0 ... 16
--------	----------

Value after reset	Depending on JX3 system bus configuration
-------------------	---

Type of access	Read access
----------------	-------------

R 100002015**Index to module array**

This register is the index to the module array where the module IDs of connected JX3 modules are stored. Array data can be read in R 100002016.

Register properties

Values	0 ... 16
--------	----------

Correlation between R 100002015 and R 100002016:

R 100002015	R 100002016
0	Number of detected JX3 modules
1	Module ID of the first JX3 module
2	Module ID of the second JX3 module
...	...

R 100002016**Module array**

This register shows the contents of the module array the index of which is contained in R 100002015.

2 New Features

Register properties

Values	0 ... 65.535
Value after reset	Depending on JX3 system bus configuration
Type of access	Read access
Takes effect	once a value has been entered into R 100002015

Module codes of JX3 modules:

Module code	JX3 module
300	JX3-DI16
301	JX3-DIO16
302	JX3-DO16
303	JX3-AI4 (16 bits)
304	JX3-AO4
305	JX3-MIX
306	JX3-REL2-2A
307	JX3-THI2-RTD
308	JX3-CNT
309	JX3-SER
311	JX3-PRN
312	JX3-THI2-TC
313	JX3-AI4 (12 bits)
314	JX3-AO2
316	JX3-DMS2
317	JX3-SV1

R 100002111

Register number in case of error

This register indicates the number of the module register which should be accessed when the last error occurred.

Register properties

Values	0 ... 9.999
Value after reset	-1
Type of access	Read access
	Write access will set this register to -1

Takes effect	if bit 3 in R 100002008 is set
--------------	--------------------------------

R 100002764**Timeout for register access**

This register specifies the timeout for access to a JX3 module register in milliseconds.

Register properties

Values	0 ... 65,535 [ms]
--------	-------------------

Value after reset	2,000
-------------------	-------

Takes effect	during the next access to a JX3 module register
--------------	---

Modules suitable for connection to the system bus

Number of connectable modules The following table shows the maximum number of modules which can in parallel be connected to the system bus of the controller JC-350.

Controller	JX2-I/O Modules IP67 Modules	JX-SIO CANopen Modules	JX2-Slave Modules JetMove
JC-350-4	23	10	4
JC-350-8	23	10	8

Connectable Modules

The following modules by Jetter AG can be connected to the system bus of the controller JC-350:

- non-intelligent JX2-I/O modules
 - intelligent JX2-Slave modules
 - servo amplifiers JetMove 1xx, JetMove 2xx, and JetMove 6xx
 - IP67 modules LioN-S and LJX7-CSL
 - JX-SIO and Smart-I/O
-

third-party CANopen modules

The following third-party CANopen modules can be connected to the system bus of the controller JC-350:

- valve terminals by Festo
 - valve terminals by SMC
 - valve terminals by Burkert
 - I/O-System 750 by Wago
 - ecostep drives□ by Jenaer Antriebstechnik
 - EPOS drives by maxon
 - Milan Drive by GFC
 - AS interface master by Bihl+Wiedemann
-

3 Fixed Software Bugs

Introduction This chapter describes the software bugs which have been fixed in the new operating system release.

Contents This chapter contains the following topics:

Topic	Page
Controller stalls: Program gets stuck in a task	16
Missing error signal in case of invalid file "/app/start.ini"	17
Display Redirection to JX2-SER1.....	18
OS Update via FTP Doesn't Work Properly	19
Crash When Updating the OS of a JX2-Slave Module.....	20

Controller stalls: Program gets stuck in a task

Effects of this Bug

- The controller got stuck in processing only one task of the application program.
 - Via Ethernet, the controller responds only to a "ping".
 - Other communication is not possible.
-

Affected Revisions

The following revisions of the JC-350 are affected by this bug:

OS revision	< 1.03.0.02
Hardware revision	not applicable
Configuration or operating mode	not applicable

Remedy / Workaround

There is no remedy for affected revisions. Minimizing the number of accesses to registers on JX2 and JX3 modules reduces only the probability for this bug to happen.

Bug Fix

Starting from the following revisions of the JC-350 this bug has been fixed:

OS revision	1.04.0.0
Hardware revision	not applicable
Configuration or operating mode	not applicable

Missing error signal in case of invalid file "/app/start.ini"

Effects of this Bug

If the contents of file "/app/start.ini" are invalid, and, therefore, the application program can't be loaded, there is no error message in the error register. The green LED "R" is lit, and the status register of the application program indicates that the program is running.

Affected Revisions

The following revisions of the JC-350 are affected by this bug:

OS revision	< 1.04.0.0
Hardware revision	not applicable
Configuration or operating mode	not applicable

Remedy / Workaround

Download the application program in JetSym. When doing so, a new file "/app/start.ini" will be created.

Bug Fix

Starting from the following revisions of the JC-350 this bug has been fixed:

OS revision	1.04.0.0
Hardware revision	not applicable
Configuration or operating mode	not applicable

Display Redirection to JX2-SER1

Effects of this Bug Redirecting display commands to a serial interface module JX2-SER1 works only if the special register for display redirection to a printer has been set to a module on the JX2 system bus.

Affected Revisions The following revisions of the JC-350 are affected by this bug:

OS revision	< 1.04.0.0
Hardware revision	not applicable
Configuration or operating mode	not applicable

Remedy / Workaround Enter the number of a module on the JX2 system bus into the special register for display redirection to a printer even if you don't have connected a printer module JX2-PRN1.

Bug Fix Starting from the following revisions of the JC-350 this bug has been fixed:

OS revision	1.04.0.0
Hardware revision	not applicable
Configuration or operating mode	not applicable

OS Update via FTP Doesn't Work Properly

Effects of this Bug

When the controller is rebooted following an OS update via FTP, the OS sometimes fails to launch. The controller remains in boot loader stage, as there is no proper operating system. The new OS will launch if you wait a few seconds before you reboot the controller following an OS update.

Error Cause

The FTP server in the controller notifies the FTP on the PC of the successful OS update regardless of the fact that the OS has not yet been saved completely.

Affected Revisions

The following revisions of the JC-350 are affected by this bug:

OS revision	1.02.0.00 ... 1.03.0.00
Hardware revision	not applicable
Configuration or operating mode	not applicable

Remedy / Workaround

Following an OS update via FTP wait at least 30 seconds before rebooting the controller.

Bug Fix

Starting from the following revisions of the JC-350 this bug has been fixed:

OS revision	1.04.0.0
Hardware revision	not applicable
Configuration or operating mode	not applicable

Crash When Updating the OS of a JX2-Slave Module

Effects of this Bug If the system tries to access a register of a module on the JX2 system bus during OS update of a JX2-Slave module, the OS update may abort. As a result, further communication with the controller is interrupted.

Affected Revisions The following revisions of the JC-350 are affected by this bug:

OS revision	< 1.04.0.0
Hardware revision	not applicable
Configuration or operating mode	not applicable
Note	853

Remedy / Workaround Make sure that no access is made to a register of a module on the JX2 system bus during an OS update of a JX2-Slave module.

Bug Fix Starting from the following revisions of the JC-350 this bug has been fixed:

OS revision	1.04.0.0
Hardware revision	not applicable
Configuration or operating mode	not applicable

4 Quick Reference JC-3xx

Operating System Release

This quick reference gives an overview of registers and flags used in connection with the controller JC-350 with OS release 1.04, as well as of the connector assignment.

General register overview

100000 ... 100999	Electronic Data Sheet (EDS)
101000 ... 101999	Configuration
102000 ... 102999	Realtime clock
